PROFILE

Third-semester Computer Science student at TU Hamburg with a strong interest in data, automation and AI. I enjoy building solutions that reliably automate recurring work – with clear rules and quality checks. As a student tutor I explain technical content clearly; 1.5 years in a hotel front office taught me responsibility and how to work with people.

PROJECTS

AI-Agent Workflow for Job Application Automation

Personal project · built with Claude · 2026

- Runs daily: searches job portals, deduplicates via Gmail, generates tailored PDF applications with Python (reportlab), drafts emails and pre-fills forms
- Defined the process, rules and quality checks myself – including a human approval step and SHA-256 verification of uploads

Python · reportlab · Claude · Gmail · Automation

Heatmap Generator in C (team project, 3 people)

Winter 2024/25

TU Hamburg · course Procedural Programming

- Command-line tool that turns 3D measurement data (x, y, z) from CSV files – e.g. depth profiles of the Elbe riverbed – into BMP heatmaps
- Custom output resolution with interpolation of intermediate points (linear and nearest neighbour); 10-level colour scale from dark blue via green to red
- Built with structs, pointers, dynamic memory management and file I/O; presented to the tutor and other groups
